

GigaSpaces XAP 9.5.1 Core Training

Using Core Features of GigaSpaces XAP and OpenSpaces

Enter the SBA world with GigaSpaces XAP and its built-in development framework OpenSpaces.

This training is designed to provide you with the knowledge required to build high throughput, low latency applications for scaling with GigaSpaces XAP.

You will not only learn how to code such applications, but you will also gain a better understanding of how GigaSpaces XAP is a unique enabler of highly transactional, high volume, low latency applications, as well as exactly what types of architecture GigaSpaces XAP is best suited for.

AUDIENCE

Developers
Project Managers
SI Architects

KNOWLEDGE REQUIREMENTS

Java working knowledge
Eclipse IDE knowledge is a plus

LENGTH

3 Days

BONUS

Plenty of hands-on lab sessions on modifying the BillBuddy applications

SYLLABUS

Foundations (Day 1)

Course Introduction
XAP Introduction
BillBuddy Application
Java Spring Introduction
Connecting to a Space-My First XAP Application
POJOs - Space Classes

XAP API (Day 2)

Space Topologies and Data Model
Space Access API
Document API
Messaging - Event Containers
Transactions

XAP API Continued (Day 3)

Task Executors
Space based remoting
Web Application
Mirroring Service
Additional API
Configuration & other considerations
Summary

HARDWARE AND SOFTWARE REQUIREMENTS

Computer Requirements

- RAM: minimum 3 GB of RAM required for exercises and platform to operate, 4 GB and up recommended.
- Disk Space: At least 6 GB of free disk space
- Wireless Internet connection (recommended)
- User with sufficient privileges for creating environment variables and execute processes
- Linux/Mac OS - Trainees should have a user with Administrator privileges (to edit system files for environment variables)
- Windows OS - Trainees should have write/Execute on root folder of HDD(C:)

Supported Operating Systems

- Windows 7, 8
- Windows XP
- Linux
- Mac OS X

Additional Software Requirements

- PDF Reader
- Zip software

classroom HW requirements

- Projector 1024*768 minimum resolution
- White Board
- Erasable Markers
- Desktops or Laptops (see HW Requirements)
- Internet connectivity for all participants
- Electricity outlets for all computers/monitors and other equipment.
- At least 3 electricity outlets next to instructor location.

DAY 1 – FOUNDATION

GOALS:

- Understand the paradigm and implications of Space Based Architecture (SBA), viewed in light of Tier Based Architecture (TBA)
- Understand OpenSpaces
- Understand the product structure
- Run a fully functional BillBuddy application
- Gain some hands-on experience
- Develop your first XAP application

Lesson 1: course Introduction

Duration: 0.5 hour

- Introduction and background of the trainer, participants, labs and expectations
- Lab Session

Lesson 2: XAP Introduction

Duration: 1.5 hour

- Why XAP?
- XAP Terminology Comparison to Common Platforms and Servers
- XAP Runtime Environment
- XAP Application Components
- Configuring your Environment
- XAP Management Center (gs-ui)
- XAP Web Dashboard
- Lab Session

Lesson 3: BillBuddy Application

Duration: 1 hour

- BillBuddy application presentation
- Configuring Eclipse for XAP
- Lab Session

Lesson 4: Java Spring Introduction

Duration: 1 hour

- Spring origin and rationale
- Spring Bean lifecycle
- Spring Demo
- Spring Annotations
- OpenSpaces and Spring
- Lab Session

Lesson 5: Connecting to a Space – My First XAP Application

Duration: 1 hour

- My First XAP Application
- Create a Processing Unit with an embedded space
- Deploy Processing Unit to Service Grid Processing Unit Container
- Deploy Processing Unit to Integrated Processing Unit Container
- Lab Session

Lesson 6: POJOs – Space Components

Duration: 1 hour

- POJOs - Space Classes
- GigaSpace Interface - Basic Read and Write operations
- GigaMap Interface - Basic operations
- Lab Session

DAY 2 – XAP API

GOALS:

- Gain more practical understanding of Space Base Architecture
- Lots of hands-on experience
- Coding and configuration
- Experience complex space access
- Experience XAP messaging

Lesson 7: Space Topologies and Data Model

Duration: 1.5 hour

- Space Topologies
- Data Model Considerations
- Lab Session

Lesson 8: Space Access API

Duration: 1.5 hour

- Space Operations
- Read By Id
- Read By Template
- Read By SQLQuery
- Additional Read considerations and options
- Take and Clear Operations
- Write Operations
- Projection API
- Change API
- Lab Session

Lesson 9: Document API

Duration: 1 hour

- GigaSpaces Document API
- The Document Type
- Creating a Document
- Reading and Removing a Document
- Lab Session

Lesson 10 : Messaging - Event Containers

Duration: 1 hour

- Messaging and Event Containers Basics
- Event Containers API
- Event Driven Architecture
- Lab Session

Lesson 11: Transactions

Duration: 1 hour

- Transaction Basics
- Enabling Transactions
- Read Modifiers
- Pessimistic and Optimistic Locking
- Lab Session

DAY 3 – XAP API CONTINUES

GOALS:

- Gain a more complete understanding of XAP functionalities adding
- More business logic
- A web front-end
- Scalability
- Persistency to disk

Lesson 12: Task Executors

Duration: 1.5 hour

- Task Executors Basics
- Task Executor API
- Server Side Injection
- Distributed Task Executor API
- Lab Session

Lesson 13: Space Based Remoting

Duration: 1 hour

- Space Based Remoting Basics
- Space Based Remoting API
- Space Based Remoting Routing
- Lab Session

Lesson 14: Persistency – Mirror Service

Duration: 1 hour

- Persistency Basics
- Mirror Service Configuration
- Monitoring
- HSQLDB
- Lab Session

Lesson 15: Web Application

Duration: 0.5 hour

- Web Application Basics
- Configuration
- Lab Session

Lesson 16: Additional API

Duration: 1 hour

- Administration and Monitoring API
- Alert API
- JPA intro + JPQL

Lesson 17: Configuration

Duration: 1 hour

- Avoiding Big Jars deployment
- SLA
- Memory Management
- Elastic PU
- POJO XML Space Mapping (gs.xml)
- Maven

Lesson 18: Summary

Duration: 1 hour

- Summary
- Wrap Up
